

As an active operator on 160 meters I fully appreciate the annoying interference made by both AM and SSB phone operators below 1843 KHz when using CW. I have operated from worldwide locations on 160 meter and surely appreciate this petition. Every 160-meter operator will benefit by RM-10352. This change is long overdue, benefits all, including worldwide operators, and has minimal cost impact.

Thank you very much, Willem A. Angenent, K6NDV
